Soban Ali

AI Full-Stack Engineer — Agentic Systems, RAG & Full-Stack Apps

sobanali256@gmail.com | linkedin.com/in/sobanali256 | github.com/sobanali256 | sobanali.vercel.app

Education

FAST NUCES — Lahore, PK
Bachelor of Computer Science — CGPA: 3.70 — *Expected 2027*

Lahore Grammar School — Lahore, PK
A-Level: 3A 1A — O-Level: 5A* 3A 1B* — *2018 – 2023*

Experience

Ledelsea — Remote
AI Intern — RAG Pipelines & Agentic Testing Platforms — *Apr 2026 – Oct 2026*

- Built a proof-of-concept AI platform that generated end-to-end tests from source code: tree-sitter indexed Java and TypeScript repos into pgvector, and a LangGraph pipeline on AWS Bedrock mapped business processes into test scenarios.
- Turned human-approved cases into WebdriverIO scripts (migrated from Playwright) that were statically checked and dry-run before running live; failures were diagnosed from traces, console logs and screenshots, with evidence in S3 and results on a React dashboard.
- Built an evaluation harness whose LLM judge was calibrated against human labels (Cohen's $\kappa = 0.92$); a full run on the authentication module passed 13 of 15 generated tests in 37 min for $0.78.
- Built hybrid BM25 + embedding retrieval in ChromaDB with parent-child chunking and per-section evidence routing for an RFP proposal platform; fixed a silent schema bug that failed query expansion on 100% of requests.
- Replaced the RAG prototype, which could not be ready in time, with eight Claude skills that drafted RFP responses in a 15-phase workflow, one subagent per section, from 29 indexed past proposals; used on five public-sector RFPs.
- Wrote Python quality gates (depth, voice, style, buyer-table fidelity) that blocked the Word build until every check passed; unknowns were flagged and legally binding fields left for human review.

Skills

Generative AI: LangGraph, LangChain, CrewAI, Claude API, OpenAI API, LangSmith, LangFuse, RAG, Multi-Agent Systems
ML / DL: PyTorch, TensorFlow, Keras, scikit-learn, Hugging Face, OpenCV, Transfer Learning, CNNs
Languages / Tools: Python, TypeScript, C++, SQL, Git, Docker
Databases: PostgreSQL, pgvector, ChromaDB, MySQL
Backend / Cloud: FastAPI, Node.js, React, Firebase, AWS (EC2, RDS, ECS Fargate, Bedrock, S3, SQS), WebdriverIO, Playwright

Projects

Malware Detection – CNN Transfer Learning Research Replication | *TensorFlow, Keras, OpenCV* — GitHub

- Replicated the Younas et al. (2025) malware-classification pipeline across 25 families on the Malimg dataset.
- Fine-tuned VGG-16 to 99.10% test accuracy, beating the paper's 97.98% benchmark.
- Implemented SVD decomposition, low-rank reconstruction (k=60), and JET colormap for 3-channel conversion.

AniTrack – Anime Tracking PWA | *React, Vite, Firebase, AniList API* — Live App

- Built a PWA integrating the AniList API with Jikan API as fallback for anime tracking and push notifications via Cloud Functions.
- Developed a content-based recommendation engine surfacing personalized suggestions from watch history.
- Designed an AI chat companion with multiple personalities, plus a guest mode usable before sign-up.

WarRoom – Autonomous Multi-Agent Contract Negotiation | *CrewAI, GPT-4o-mini* — GitHub

- Engineered a multi-agent adversarial system using CrewAI to surface blind spots in contracts.
- Orchestrated a sequential debate between three agents (Shark, Shield, Mediator) with zero-touch role detection.
- Tuned prompts so the debate holds up on GPT-4o-mini, at a fraction of GPT-4o's cost.

Certifications

Generative AI Application Developer, NCEAC-HEC Training (Top Performer) — Dec 2025
Advanced Learning Algorithms, Coursera — Jun 2025
Supervised Machine Learning: Regression and Classification, Coursera — Mar 2025

Achievements

Ranked 117th out of 1,980 teams globally, Reply AI Agent Challenge 2026 (multi-agent fraud detection system)
Dean's Honor List, FAST NUCES — Fall 2023, Spring 2024, Fall 2024, Spring 2025, Fall 2025
